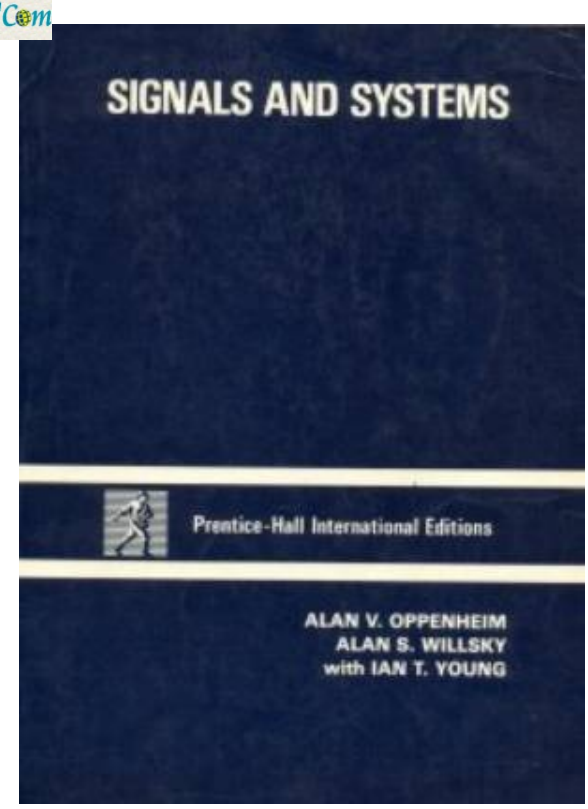
SIGNALS AND SYSTEMS

ALAN V. OPPENHEIM
ALAN S. WILLSKY
IAN T. YOUNG



CONTENTS

Preface xiii

1 Introduction 2

2 Signals and Systems 7

2.0 Introduction 7
2.1 Signals 7
2.2 Transformations of the Independent Variable 12
2.3 Basic Continuous- Time Signals 17
2.4 Basic Discrete-Time Signals 26
2.5 Systems 35
2.6 Properties of Systems 39
2.7 Summary 45
Problems 45

3 Linear Time-Invariant Systems 69

3.0 Introduction 69
3.1 The Representation of Signals in Terms of Impulses 70
3.2 Discrete-Time LTI Systems: The Convolution Sum 75
3.3 Continuous-Time LTI Systems: The Convolution Integral 88
3.4 Properties of Linear Time-Invariant Systems 95
3.5 Systems Described by Differential and Difference Equations 101
3.6 Block-Diagram Representations of LTI Systems Described by Differential Equations 111
3.7 Singularity Functions 120
3.8 Summary 125
Problems 125

4 Fourier Analysis for Continuous-Time Signals and Systems 161

4.0 Introduction 161
4.1 The Response of Continuous- Time LTI Systems to Complex Exponentials 166

4.2 Representation of Periodic Signals: The Continuous- Time Fourier Series 168
4.3 Approximation of Periodic Signals Using Fourier Series and the Convergence of Fourier Series 179
4.4 Representation of Aperiodic Signals: The Continuous-Time Fourier Transform 186
4.5 Periodic Signals and the Continuous-Time Fourier Transform 196
4.6 Properties of the Continuous- Time Fourier Transform 202
4.7 The Convolution Property 212
4.8 The Modulation Property 219
4.9 Tables of Fourier Properties and of Basic Fourier Transform and Fourier Series Pairs 223
4.10 The Polar Representation of Continuous-Time Fourier Transforms 226
4.11 The Frequency Response of Systems Characterized by Linear Constant -Coefficient Differential Equations 232
4.12 First-Order and Second-Order Systems 240
4.13 Summary 250
Problems 251

5 Fourier Analysis for Discrete-Time Signals and Systems 291

5.0 Introduction 291
5.1 The Response of Discrete- Time LTI Systems.to Complex Exponentials 293
5.2 Representation of Periodic Signals: The Discrete- Time Fourier Series 294
5.3 Representation of Aperiodic Signals: The Discrete-Time Fourier Transform 306
5.4 Periodic Signais and the Discrete-Time Fourier Transform 314
5.5 Properties of the Discrete- Time Fourier Transform 321
5.6 The Convolution Property 327
5.7 The Modulation Property 333
5.8 Tables of Fourier Properties and of Basic Fourier Transform and Fourier Series Pairs 335
5.9 Duality 336
5.10 The Polar Representation of Discrete-Time Fourier Transforms 343
5.11 The Frequency Response of Systems Characterized by Linear Constant-Coefficient Difference Equations 345
5.12 First-Order and Second-Order Systems 352
5.13 Summary 362
Problems 364

6 Filtering 397

6.0 Introduction 397
6.1 Ideal Frequency-Selective Filters 401
6.2 Nonideal Frequency-Selective Filters 406
6.3 Examples of Continuous- Time Frequency-Selective Filters Described by Differentiai Equations 408
6.4 Examples of Discrete- Time Frequency-Selective Filters Described by Difference Equations 413
6.5 The Class of Butterworth Frequency-Selective Filters 422
6.6 Summary 427
Problems 428

7 Modulation 447

7.0 Introduction 447
7.1 Continuous-Time Sinusoidal Amplitude Modulation 449
7.2 Sorne Applications of Sinusoidal Amplitude Modulation 459
7.3 Single-Sideband Amplitude Modulation 464
7.4 Pulse Amplitude Modulation and Time-Division Multiplexing 469
7.5 Discrete-Time Amplitude Modulation 473

7.6 Continuous-Time Frequency Modulation 479
7.7 Summary 487
Problems 487

8 Sampling 513

8.0 Introduction 513
8.1 Representation of a Continuous- Time Signal by Its Samples: The Sampling Theorem 514
8.2 Reconstruction of a Signal from Its Samples Using Interpolation 521
8.3 The Effect of Undersampling: Aliasing 527
8.4 Discrete-Time Processing of Continuous-Time Signals 531
8.5 Sampling in the Frequency Domain 540

8.5 Sampling in the Frequency Domain 540
8.6 Sampling of Discrete-Time Signals 543
8.7 Discrete-Time Decimation and Interpolation 548
8.8 Summary 553
Problems 555

9 The Laplace Transform 573

9.0 Introduction 573
9.1 The Laplace Transform 573
9.2 The Region of Convergence for Laplace Transforms 579
9.3 The Inverse Laplace Transform 587
9.4 Geometrie Evaluation of the Fourier Transform from the Pole-Zero Plot 590
9.5 Properties of the Laplace Transform 596
9.6 Sorne Laplace Transform Pairs 603
9.7 Analysis and Characterization of LTI Systems Using the Laplace Transform 604
9.8 The Unilateral Laplace Transform 614
9.9 Summary 616
Problems 616

10 The z-Transform 629

10.0 Introduction 629
10.1 The z- Transform 630
10.2 The Region of Convergence for the z- Transform 635
10.3 The Inverse z-Transform 643
10.4 Geometrie Evaluation of the Fourier Transform from the Pole-Zero Plot 646
10.5 Properties of the z-Transform 649
10.6 Sorne Common z- Transform Pairs 654
10.7 Analysis and Characterization of LTI Systems Using z-Transforms 655
10.8 Transformations between Continuous- Time and Discrete- Time Systems 658
10.9 The Unilateral z-Transform 667
10.10 Summary 669
Problems 670

11 Linear Feedback Systems 685

11.0 Introduction 685
11.1 Linear Feedback Systems 689
11.2 Sorne Applications and Consequences of Feedback 690
11.3 Root- Locus Analysis of Linear Feedback Systems 700
11.4 The Nyquist Stability Criterion 713
11.5 Gain and Phase Margins 724
11.6 Summary 732
Problems 733

Appendix Partial Fraction Expansion 767

A.0 Introduction 767
A.1 Partial Fraction Expansion and Continuous- Time Signals and Systems 769
A.2 Partial Fraction Expansion and Discrete-Time Signals and Systems 774

Bibliography 777

Index 783
