کتاب درسی:

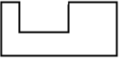

مجموعه کتاب های مثلث نارنجی، خود آموز طراحی مکانیکی با

Solid Work

مهندس هادی جعفری

انتشارات نشر آفرنگ

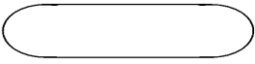

جلسه اول

1. Being familiar with Part area
2. To remove Task pane (پنجره), go to: View/Task Pane
3. Sketch  through Front Plane
4. Feature and Extrude¹
5. Go to Display Style
6. Go to View Orientation to have Isometric, and all Views
7. Then 2 Views and 3 Views
8. Adjust US method, if needed- Through:
Tools/Option/System Option/Display/Third Angle Projection
7. Sketch  through Top Plane and Extrude it, (same shape however different views will be appeared)
8. Go to View Orientation to have Isometric, and all Views
9. Clarify the difference of Top, Front and Right side

¹. To slow down view transition, Go to Tools/Option/System Option/View/ Transition/View Transition/Slow

جلسه دوم

1. Zoom in and Zoom out²
2. Sketch all shapes, Line, Rectangle, arc, Polygon, slot
3. Sketch all shapes use Dimension- Convert IPS to MMGS
4. Extrude some of them
5. The problem in Extrude with wrong shapes like  or 
6. Trim, Split Entity
7. In sketch: Linear Pattern and Fillet and Chamfer, Circular Pattern
8. Draw , go to Extrude and check symbol in Direction 1 and give 20 mm, check symbol in Thin Feature and give 5 mm, Note: in this case open shape like  can be also extruded

². If the sketch is disappeared go to: View/Workspace/Default

جلسه سوم

1. Normal to and Do some shapes on a rectangle cube
2. Relations, Lines, Points (merge), Fix, etc.
3. Relation, Tangent , Concentric, Coradial,
4. Edit area, enter and exit
5. Copy (Ctrl C -Ctrl V) and Move (just take it)

جلسه چهارم

1. Base Extrude. Blind, Through all,

a) Up to surface(e.g. A), etc

b) Offset from Surface

c) Mid Plane

d) Up To body does not work

2. Cut Extrude, open shapes (line)

3. Cut Extrude, close shapes (rectangle or circle),

a) blind, Through all,

b) Mid plane

c) Up to next (up to next feature, the next feature must be greater than cut profile),

d) Up to surface, (e.g. surface A)

e) Cut on a path,

f) Off-set from surface

g) the icon of **Up to body** is not available in some shapes, usually is used for 2 bodies with 2 planes

جلسه پنجم

1. Sketch Mirror
2. Offset Entity
3. In Feature Edit, enter and exit edit
4. Revolved Boss
5. Revolved Cut
6. Sweep (Follow Path, Keep Normal Constant)
7. Sweep (Follow path and 1st Guide Curve, **Path= Straight Line**, Guide=3 point Arc)
Note:
 - a. draw a Circle in Top Plane,
 - b. exit sketch
 - c. Normal to in Front Plane and edit,
 - d. draw path which is a straight line at the middle of the circle and then exit sketch,
 - e. edit Front Plane again,
 - f. draw Guide Curve which is 3-point -arc and then exit edit,
 - g. go to feature and then Sweep
8. Sweep (Sweep Twist)
9. Sweep Cut
10. Plane, Front, Top, Side and 45.
11. Draw a sphere with a hollow spherical space inside
12. Draw a solid sphere and cut a corner by a spherical shape

جلسه ششم

1. Loft and Loft cut (for Guide curve, Pierce Relation should be done for both circles)
2. Fillet and Chamfer(vertex) (Variable Radius Fillet, in **Variable Radius Parameters** a. click on **V1** and then give a radius, b. click on **V2** and then give another radius)
3. Linear Pattern in Feature
4. Circular Pattern in Feature
5. Shell (first extrude the shape of  and then use shell)

6. Mirror in Feature
7. Dome
8. Flex (from Insert/Feature/Flex), twist , Tapering and Bending, Stretching, بدون تغییر مقطع)

جلسه هفتم

1. **Normal to** on a small surface of a cube and draw a large sketch on it
2. Make a Shaft and try to sketch on its curved side (which is not possible)
3. Reference geometry and sketch on a circular surface
4. First Reference and a point as the second Reference
5. First Reference and a Face as the second Reference(45° Plane)
6. Rib (simple and complex)
7. Flange
8. Spring

جلسه هشتم

1. Drawing Area for 3-views and its adjustment;

To bring back Task Pane (پنجره), go to: View/Task Pane

- a) Scale
- b) Line Font
- c) Hidden Line: Tools/Option/Document Properties/Line Style/Dashed or Hidden Line/

فاصله
|
A,0.5,-0.25
|
طول خط

- d) Center Line: Tools/Option/Document Properties/Line Style/Center Line/

فاصله اول فاصله دوم
| |
A, 3,-0.25,0.25,-0.25
| |
طول خط کوچک
طول خط بزرگ

- e) To bring Automatic Center Line Go to: Annotation/Center Mark
- f) Click the Center mark in Corresponding View, Then remove the Green Tick in Click on the Center mark in Corresponding View, Then remove the Green Tick in the box Use Document Default and Then put a Tick in Center Line Font

- g) Use angle in case of not needing horizontal Center Line e.g.

2. Sketch in Drawing Area, Change Layer

3. Table and Frame

- a. go to Dimension/Leaders/Outside/Diameter

(Note: if the arrow is inside of the circle, just take it and bring it out)

b. go to Dimension/Leaders/inside/Radius

(Note: if the arrow does not go inside of the circle, just click on the arrow)

The drawing shows a mechanical part with the following dimensions and features:

- Front View (Top Left):** Total width 201, total height 115. A central vertical slot has a width of 113. A sloped surface on the right side is at a 25-degree angle. A base feature on the left has a height of 69.
- Top View (Bottom Left):** Shows a 25-degree angle on the left side. Horizontal dimensions from the left edge are 37, 51, and 18. The bottom width is 30.
- Top View (Bottom Right):** Shows a sloped surface on the left side. Horizontal dimensions from the right edge are 92 and 32. The total width is 300 and the height is 90.
- Isometric View (Top Right):** A 3D perspective view of the part.

Title:	A4	No.	Scale: 1/4
Drawn by: M. R. M.	Material: Cast Iron		0 20 mm
Checked by: M. R. M.	Date:		

جلسه نهم

1. Sections, Hatching
2. Removed Section
3. Detail View

جلسه دهم

- 1. Basic Assembly
- 2. Exploded View

جلسه یازدهم

1. Derived Sketch

- a. Click on the sketch of the rectangle feature made in Top Plane
- b. Press Ctrl
- c. Click on the surface you want to be deprived that sketch
- d. Release Ctrl
- e. Go to: insert/derived sketch
- f. Go to: Feature/Extruded Cut
- g. Change the sketch in the Top Plane

2. Copy Feature

- a. Click on the Feature you want to copy
- b. Go to: Edit/Copy
- c. Right click on the surface you want to paste on it and do Normal to
- d. Go to: Edit/Paste
- e. Note that the extrude is as much as the length of the source feature

3. Advanced Assemblies, Limit Mate, Piston and Cylinder

4. Fix Mate, to fix any part in assemblies Area Right click on the part and press Fix

5. Advanced Assemblies, Linear Coupler

جلسه دوازدهم

1. Advanced Assemblies, Width Mate

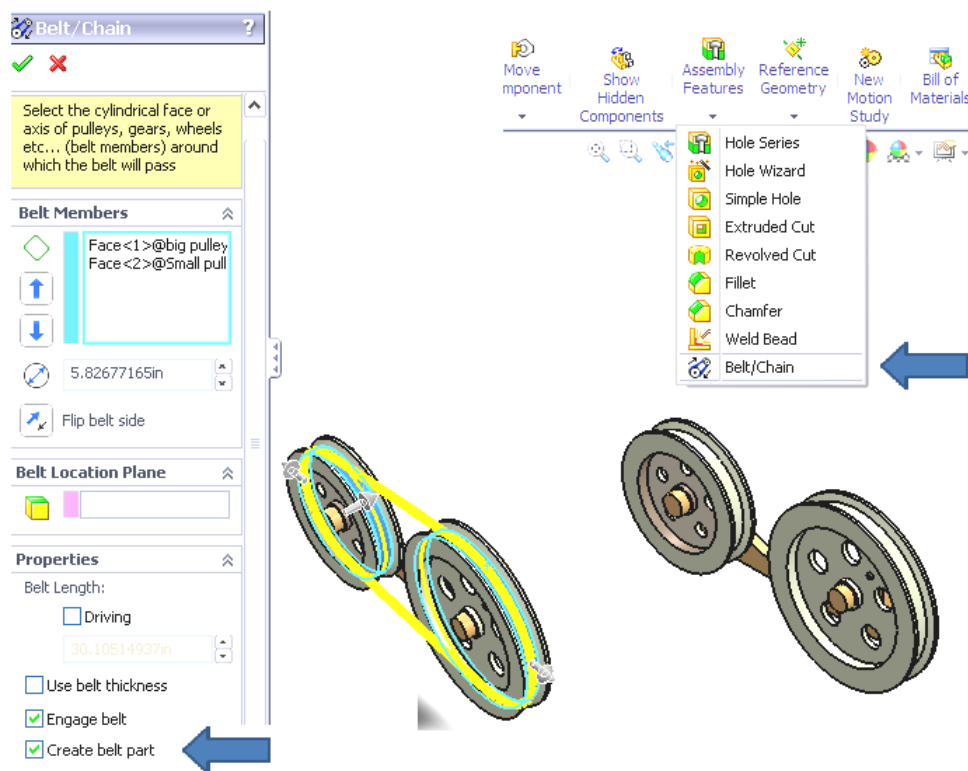

- Make a shaft with 20 mm diameter and 100 mm length
- Make a collar with 20 mm inside diameter and 35 mm outside diameter
- Go to New Assemblies and put them together using Standard Mate
- Go to Advanced Mate and select Width
- In **width Selection** box select both side of the shaft
- In **Tab Selection** box select both side of the collar

2. Advanced Assemblies, Belt

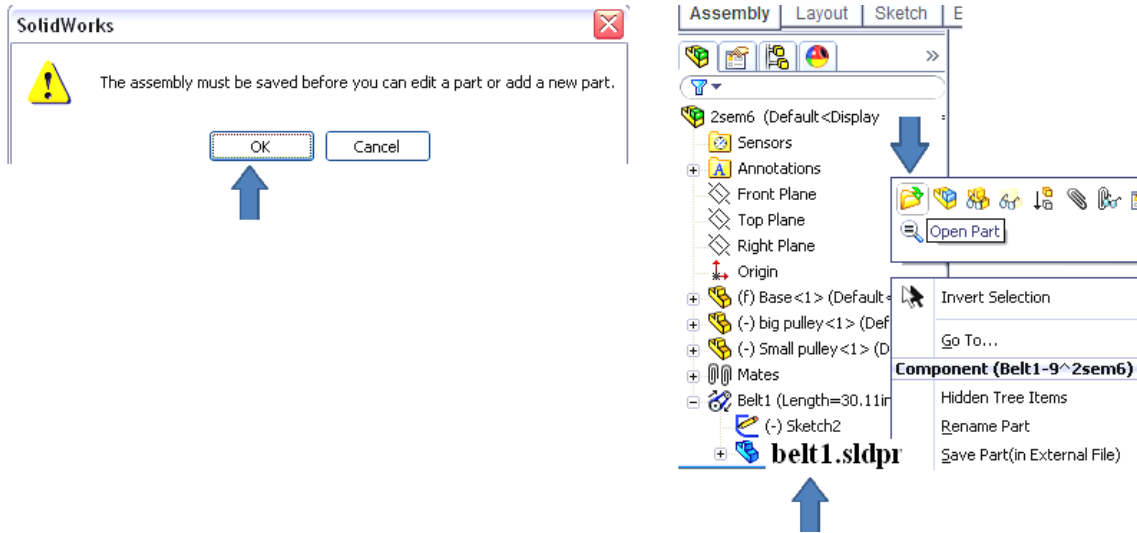

- Open an New/Assembly
- Assemble all components
- From Assemblies Features, Select Belt & Chain

- Select the face of pulley groove face
- Put a check symbol in Create Belt Part
- Press green Check symbol
- Press **ok** and save the assembly
- Open belt
- Right Click on belt1
- Open Part

- k. The belt will be appeared
- l. Reference Geometry / select a proper plane, then second Reference/ the point junction of the line and the **small curve** part of the belt
- m. Using the same dimension of the pulley's groove make a profile for the belt

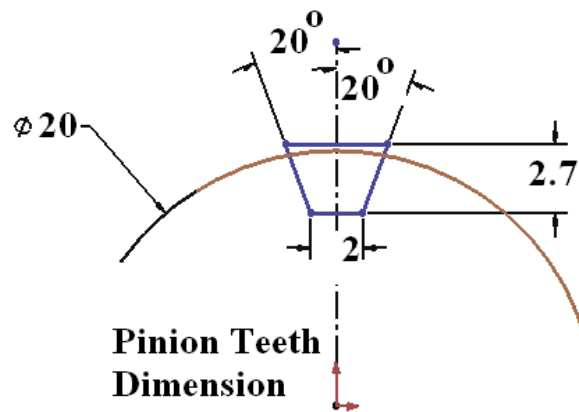

- n. Using **Sweep** finish the belt and exit
 - o. Save changes to **belt1.sldprt**
 - p. Press Yes
 - q. Hide the belt Line
 - r. Save it again
 - s. Note that the belt does not rotate
3. Advanced Assemblies, Gear

جلسه سیزدهم

1. Advanced Assemblies, Rack & Pinion

Note: the edge of the rack and the edge of the pinion shaft must be selected

2. Advanced Assemblies, Screw

Helix/Spiral1 ?

✓ ✗

Defined By: Pitch and Revolution

Parameters

- Constant pitch
- Variable pitch

Pitch: **10 mm**

Reverse direction

Revolutions: **8**

Start angle: **270**

- Clockwise
- Counterclockwise
