1. A semi- infinite solid cylinder of radius $R$ and thermal conductivity of $k$ is exposed to ambient temperature of $\mathrm{T}_{\infty}$. The cylinder base temperature is $\mathrm{T}_{0}$. Find steady state two dimensional temperature distribution, $\mathrm{T}(r, z)$, for following cases :
(a) Heat transfer coefficient is large.
(b) Heat transfer coefficient is finite, $h$.

2. Consider a long rod of radius $\mathrm{r}_{0}$ whose its cross section is semicircle. The surface temperature at $\mathrm{r}=\mathrm{r} 0$ is $f(\theta)$ and the temperature of the lower surface is $\mathrm{T}_{0}$. Find the steady state temperature distribution of the rod, $\mathrm{T}(r, \theta)$.
